

# Science Fair Project Question Form

*DUE - January 22, 2016*

## Your Science Fair Project Question

The question that you select for your science fair project is the center of your work. The research and experiment you will be conducting all revolve around finding an answer to the question you are posing. It is important to select a question that is going to be interesting to work on for at least a month or two and a question that is specific enough to allow you to find the answer with a simple experiment. A scientific question usually starts with: How, What, When, Who, Which, Why, or Where.

## Examples of good Science Fair Project questions:

- Why are fingerprints different?
- When is the best time to plant soybeans?
- Which material is the best insulator?
- Which soap makes more bubbles?
- How do different foundations stand up to earthquakes?
- What sugars do yeast use?

Write your Science Fair Project question below 

I have discussed this question with my parent(s)/guardian(s) and I am willing to commit to completing this project.
